

## Hardware for Sliding Doors of the Cooling Industry

STUV works continuously on the completion of the product spectrum of the individual divisions. The cooling industry division offers a complete hardware program for all applications in walk-in coolers and freezers. This program was introduced on the last IKK- Fair in October 2006 with innovative ideas for products for sliding doors. Now, the products have reached the production stage.

As a total solution for sliding doors, **STUV offers the locking bolt, the interior and the exterior handle.** We will present all three components in the next few weeks on our homepage, starting with the outside handle. We have already presented all these products on the last NAFEM- Show in Atlanta (GA).

### Outstanding attributes of the exterior handle

- Construction is made out of non corrosiv materials
- Handle and mounting plate is made of stainless steel
- Exterior handle is not connected with the inside handle
- Independent from door thickness
